No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                    Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to an isolated membrane-bound sorbitol dehydrogenase (SDH) from Gluconobacter oxydans. The invention includes polynucleotides (AAC83153 - AAC83154) encoding the 3 subunits of SDH (AAB35987 - AAB35989). Also included in the invention are two polynucleotide sequences AAC83156 and AAC83157 which contain the subunit coding regions. The sorbitol dehydrogenase polynucleotide sequences are useful for producing L-sorbose from D-sorbitol and for increasing the production of 2-keto-L-gulonic acid by transforming a host cell, sepecially Gluconobacter with the DNA and selecting the transformed host cell. The present sequence represents the SDH subunit 2 internal
                                                                                                                                                             Claim 2; Page 649;

This antibody is an example of an agonist molecule that specifically binds to or interacts with human granulocyte colony stimulating factor (G-CSF) receptor to stimulate cell proliferation and differentiation, especially by dimerising the receptor or activating phosphorylation of kinases associated with the receptor. Agonist antibodies can be used to stimulate proliferation of G-CSF-dependent cells, e.g. to differentiate leading to a repopulation of neutrophilic granulocyte lineage cells, especially to treat neutropenia (claimed). They can also be used to detect human G-CSF receptor immunologically.
                                                                                                                                        PPPPY motif containing peptide ENaC-beta.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Peptides AAW38115-28 are derived from epithelial sodium channel alpha (ENAC-alpha), beta (ENAC-beta) and gamma (ENAC-gamma) proteins. The peptides contain pPPDY-like motifs, which are found in the prolline rich regions of WBP-1 and WBP-2 proteins. Peptides containing this residue bind to the YAP WW domain, but not the WW domain from dystrophin or to a panel of SH3 domains. Peptides AAW38115-28 were biotinylated and complexed with alkaline streptavidin, and used in a cross affinity mapping experiment. They were tested for their ability to bind to the 3 individual novel WW domains of WWP4 (AAW36797), which were expressed as glutathione-S-transferase expression proteins. The present peptide binds to some of the WW domains of the WWP4 protein. The wW domain is a small functional domain. Its name is derived from the observation that two tryptophan residues, one in the amino terminal portion of the WW
                                                                                                                                                                                                                                                                                                                                                                    domain and one in the carboxyl terminal portion, are conserved. Most proteins containing WW domains have a function involving cell signalling and growth regulation or the organisation of the cytoskeleton. Polypeptides containing a WW domain are identified by treating a multivalent recognition unit complex that has selective binding affinity for a WW domain, with many polypeptides and identifying those with selective affinity for the complex. Proteins containing WW domains are used for targeted drug screening, i.e. to identify potential modulators of specific WW domain interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying cell signalling and growth regulatory polypeptides by reaction with multivalent recognition complex - polypeptides are useful in targetted drug selection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   09-OCT-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Synthetic.

                                                                                                                                                                                                                                                 The patent discloses novel colostrum-associated Serum Amyloid A (SAA) from mammals. SAAs are small apolipoproteins that accumulate and associate rapidly with high-density lipoprotein 3 (HDL3) during the acute phase of inflammatory response. They are characterised by the TFLK motif in the N-terminal region which has the ability to stimulate mucin 3 (MUC3) production. Colostrum associated SAAs are used to prevent or treat infectious diseases associated with enteric pathogens (particularly Escherichia coli) such as traveller's diarrhoea, infant diarrhoea, necrotising entercoolitis (NEC), urinary tract infections, and infectious diarrhoea in herd animals. They are used to prevent dysentery and other infectious diseases particularly more the military.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             22-OCT-1999; 99US-0425679

MAb 1A7 has defined light and heavy chain variable region sequences. The MAb 1A7 and polypeptides can be used for eliciting an anti-GD2 immune response. The polypeptides can also be used for detecting or purifying anti-GD2 antibody. The products can be used for treating GD2 -associated diseases, e.g. melanoma, neuroblastoma, glioma, soft tissue carcinoma, and small cell carcinoma. They can be used for palliating the disease or for reducing the risk of recurrence. Sequences MAY49212-216 represent fragments used for comparison with the light chain

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exonucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

Claim 27; SEQ ID No 32115; 634pp; English.

CC probes: Also included are a microarray comprising the novel set of probes; he novel set of probes which hybridise at high stringency to a concleic acid expressed in the human lung; measuring gene expression in a cc sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung manal lung (comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung manal lung (comprising can be expression). The array is dentifying exons in a eukaryotic genome, comprising (c) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably confine the least one elements of detectably confine expression of inthe above mentioned microarray; assigning exons to a single exon probe, having a fragment identifying exons from genomic sequence by the method confirming (a) identifying exons from genomic sequence by the method conversion of the exons in the expression of each of the exons in several confirming a probe with the exon, where a common pattern of confirming a probe with the exon, where a common pattern of the exons should be assigned to a single gene; a peptide comprising one confirming a probe with the specification, or encoded by the method confirming a probe with the specification, or encoded by the method confirming a probe with the specification, or encoded by the method confirming a probe with the specification or encoded by the method confirming a probe with the specification or encoded by the method confirming a probe with the probes are used for gene of 12011 sequences, probes/open reading The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 frames (ORF). for specification, or encoded by the probes are used for gene particularly of

                  The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesis, pulmonary hypertension and hyaline membrane disease. The present sequence is a peptide/protein encoded by a single exon probe of the invention.

Note: The sequence data for this patent did not form part
                                                                                                                                                                 Claim

                                measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exonucleic acid probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 agents on cells. The microarray of this invention presents a rar greaters to cells. The microarray of this invention presents a rar greatersty of probes for measuring gene expression, with far less big than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid
                                                                                                                                            Claim
                                                                                                                                                                      analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form printed specification, but was obtained in electronic from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical
printed specification, but was obtained

                                                                                                                                                                                                                                    The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21355-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease.

Note: The sequence data for this patent did not form part of the printed appecification, but was obtained in electronic format directly from WIPO at for with published et accuracy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 15;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               congenital heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; gene expression; heart; microarray; vascular system; cardiovascular disease; hypertension; cardiac arrhythmia;

They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of

                                                                                                                                                                                                                                                                                                                                                                     The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.

                                                                                                                                                                                                                                                                       Probe; microarray; human; placenta; lantenatal diagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microraarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                30-JAN-2001; 2001WO-US00663
                                                                                                                                                                                                                                                                                              Peptide #2682 encoded by probe for

The present invention relates to novel single exon nucleic acid probes (see AA100010-AA110067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   09-OCT-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         analyzing

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes; the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tuberous sclerosis; Gaucher's disease; Niemann-tick disease; Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histiocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; primary ciliary dyskinesis; pulmonary hypertension;

cc mRNA, and (b) measuring the label detectably bound to each probe of cc (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several tissues and/or cell types using hybridisation to a single exon cc tissues and/or cell types using hybridisation to a single exon microarrays having a probe with the exon, where a common pattern of cc expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the exonession analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary surrogeners, reproduces sclerosis, Gaucher's disease, cc unimonary dysplasia, primary ciliary dyskinesis, garcoidosis, pulmonary histiocytosis, lumporary hypertension and hyaline membrane disease. The present sequence is a peptide/protein context the sequence data for this patent did not form part of the winn intromation, but was obtained in electronic from and not form part of the printed specification, but was obtained in electronic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopoiesis regulating activity tissue growth regulating activity, reproductive hormone regulating activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is a fragment of human serum amyloid A (SAA). The invention relates to the discovery that SAA is a ligand for PPRL1 (human formyl peptide receptor variant). A complex has been isolated that comprises a peptide agent with a sequence corresponding to SAA, or its conservative variant or functional fragment, bound to PPRL1. Modulators of the SAA/PPRL1 complex are useful for treating immune system
                    The present sequence is a fragment of human serum amyloid A (SAA). Invention relates to the discovery that SAA is a ligand for FPRLI (formyl peptide receptor variant). A complex has been isolated that comprises a peptide agent with a sequence corresponding to SAA, or conservative variant or functional fragment, bound to FPRLI. Modula of the SAA/FPRLI complex are useful for treating immune system
                                                                                                                                                                                                                                                                                                       New serum amyloid A and formyl peptide receptor variant complex and its modulators, useful for treating immune system disorders, amyloidosis, inflammation, infection, organ rejection, arthritis, atherosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           disorders, amyloidosis, inflammation, infection, organ rejection, arthritis, atherosclerosis and neoplasia. Fragments of SAA were tested for their ability to modulate assembly of the SAA/FPRL1 complex.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FPRL1; immunomodulatory; antiinflammatory; antimicrobial; antiarthritic;

                                                                       The present sequence is a fragment of human serum amyloid A (SAA). The invention relates to the discovery that SAA is a ligand for FPRLI (human formyl peptide receptor variant). A complex has been isolated that comprises a peptide agent with a sequence corresponding to SAA, or its conservative variant or functional fragment, bound to FPRLI. Modulators of the SAA/FPRLI complex are useful for treating immune system disorders, amyloidosis, inflammation, infection, organ rejection, arthritis, atherosclerosis and neoplasia. Fragments of SAA were tested for their ability to modulate assembly of the SAA/FPRLI complex.

Invention relates to the discovery that SAA is a ligand for FPRLI (formyl peptide receptor variant). A complex has been isolated that comprises a peptide agent with a sequence corresponding to SAA, or conservative variant or functional fragment, bound to FPRLI. Modula of the SAA/FPRLI complex are useful for treating immune system disorders, amyloidosis, inflammation, infection, organ rejection, arthritis, atherosclerosis and neoplasia. Fragments of SAA were tes for their ability to modulate assembly of the SAA/FPRLI complex.
                                                                                           Human SAA carboxy truncation,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is a fragment of human serum amyloid A (SAA). The invention relates to the discovery that SAA is a ligand for FPRL1 (huma formyl peptide receptor variant). A complex has been isolated that comprises a peptide agent with a sequence corresponding to SAA, or its conservative variant or functional fragment, bound to FPRL1. Modulators of the SAA/FPRL1 complex are useful, for treating immune system disorders, amyloidosis, inflammation, infection, organ rejection, arthritis, atherosclerosis and neoplasia. Fragments of SAA were tested for their ability to modulate assembly of the SAA/FPRL1 complex.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       disorders, amyloidosis, inflammation, infection, organ rejection, arthritis, atherosclerosis and neoplasia. Fragments of SAA were tested for their ability to modulate assembly of the SAA/FPRL1 complex.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is a fragment of human serum amyloid A (SAA). The invention relates to the discovery that SAA is a ligand for FPRLI (huma formyl peptide receptor variant). A complex has been isolated that comprises a peptide agent with a sequence corresponding to SAA, or its conservative variant or functional fragment, bound to FPRLI. Modulators of the SAA/FPRLI complex are useful for treating immune system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Wang

The present sequence is a fragment of human serum amyloid A (SAA). The invention relates to the discovery that SAA is a ligand for FPRL1 (human formyl peptide receptor variant). A complex has been isolated that comprises a peptide agent with a sequence corresponding to SAA, or its conservative variant or functional fragment, bound to FPRL1. Modulators of the SAA/FPRL1 complex are useful for treating immune system

The invention relates to the discovery that SAA is a ligand for FPRLI (human formyl peptide receptor variant). A complex has been isolated that comprises a peptide agent with a sequence corresponding to SAA, or its conservative variant or functional fragment, bound to FPRLI. Modulators of the SAA/FPRLI complex are useful for treating immune system disorders, amyloidosis, inflammation, infection, organ rejection, arthritis, atherosclerosis and neoplasia. Fragments of SAA were tested for their ability to modulate assembly of the SAA/FPRLI complex.

                                                                                                                                                                              The present sequence is a fragment of human serum amyloid A (SAA). The invention relates to the discovery that SAA is a ligand for FPRL1 (human formyl peptide receptor variant). A complex has been isolated that comprises a peptide agent with a sequence corresponding to SAA, or its conservative variant or functional fragment, bound to FPRL1. Modulators of the SAA/FPRL1 complex are useful for treating immune system disorders, amyloidosis, inflammation, infection, organ rejection, arthritis, atherosclerosis and neoplasia. Fragments of SAA were tested for their ability to modulate assembly of the SAA/FPRL1 complex.

Invention relates to the discovery that SAA is a ligand for FPRL1 (formyl peptide receptor variant). A complex has been isolated that comprises a peptide agent with a sequence corresponding to SAA, or conservative variant or functional fragment, bound to FPRL1. Modula
